

Dear Product/Business Lead,

I hope this message finds you well. As part of our ongoing efforts to leverage data for strategic decisions, I've been analyzing our latest dataset. The goal is to identify trends and opportunities that can drive our product strategies forward.

1. Questions About the Data:

- Could you provide more context on how the data is collected? Understanding the sources and methods might offer insights into potential biases or limitations within the dataset. If you look at the data there are many biases in categorical datasets and also many missing values present.
- Are there specific brands or product categories that are of particular interest or strategic importance to our upcoming campaigns? Because when going through brands there were some name who had high frequency.

2. Discovering Data Quality Issues:

- Upon initial review and cleaning of the data, I encountered inconsistencies such as missing values and duplicate records.
- I used a combination of automated scripts to identify anomalies and manual inspection for a subset of the data, which helped in pinpointing these issues. I also used the visualization libraries to detect all anomalies.

3. Additional Information Required:

- Gaining access to related datasets, such as customer feedback or product performance metrics, could enrich our analysis and help us draw more comprehensive insights.
- Information on any recent changes to our product lineup or branding strategies would also be invaluable in interpreting the data correctly.

4. Performance and Scaling Concerns:

- As we scale our data analysis efforts, I anticipate potential challenges related to data storage and processing times, especially with real-time analytics.
- To address these, I recommend exploring more efficient data storage solutions and considering cloud-based analytics platforms that offer scalability and high-performance computing resources.

I believe that addressing these points will significantly enhance the quality and utility of our data analysis projects, ultimately contributing to more informed decision-making processes. I'm interested in exploring further into these points and arranging a time to expand on these observations. Thank you for your time and consideration. I look forward to your feedback.

Best regards,

Omkar Naik
